The Ant and Cockroach Formula (Home and Garden)

“Against the recurring problems of invasions by ants, cockroaches or other crawling Insects, a natural blend specially designed to make them go away!

A complete method for naturally stopping the invasions, blocking their passageways, and removing those insects from your sight.”

Ingredients : Essential Oils of Cinnamon, Clove, Niaouli, Rosemary, Sweet Orange.

Presentation : 10, 15, 20, 30, 50 and 100 ml glass bottles.

Shelf Life : needs to remain tightly closed and stored away from light and heat. Best if used within 3 years after the manufacturing date printed on the label.

Instructions (Indoors and Outdoors):

In **spray** , using the following dosage:

- **35 drops (1 ml) of Ant and Cockroach Formula**, to be diluted in,
- **60 ml (4 tbsp.) of alcohol**, to dilute in,
- **2 liters of water**.

Follow well the steps of dilution, ensuring good homogeneity of the final blend. Shake your spray container before each use. This mixture will only be used for the vaporization of floors, supports, and soils.

Indoors and outdoors, you have to think carefully about removing what attracts these crawling Insects, which feed on a little bit of everything, organic waste, food, but also debris from other Insects and Mites. For **home** and **garden**, other Formulas are available to fight against these Insects and Mites.

It is always important to fight invasions by spraying abundantly the places where you see those Insects, but also by looking for entry points for ants and cockroaches, where you can use a few drops of the pure product, to make a natural shield. And bringing you closer to the source, like an anthill, which you can also relocate with a few drops of pure product. For the gardens, it is also possible to pour a few drops at the foot of the plants.

Frequency of use:

This will vary depending on the results that you will see, depending on the kind of

Insects you hunt, how present and numerous they are, frequency of rains, etc. These oils also have a lasting effect. You must observe and think.

Those essential oils have good effectiveness on larvae and adults, but very low efficiency on eggs. It is necessary to think of repeating those treatments when the eggs hatch, in order to break the reproductive cycle of those Insects.

However, the spraying technique allows you to act quickly and get almost immediate results. A good practice of this method will allow you to properly protect your homes, gardens and terraces, safely, and affordably.

Precautions:

Concentrated or diluted product: do not ingest. Avoid contact with eyes and mucous membranes. Keep out of the reach of children.

Product only intended for application on floors, soils, supports for insect invasions, flowerbeds.

Tips about « sprays »:

There are two ways to make sprays with essential oils. Read carefully.

Sprays made with alcohol: the first step consists in thoroughly diluting the essential oils in pure alcohol, bought in pharmacy, or drugstore. The second step consists in adding this blend in the water contained in your vaporizer. Shake well. You do not have to use the vaporizer's content all at once. It can be stored, but you need to remember to shake the bottle before each use.

Sprays made without alcohol: for single use only, you can prepare a spray with warm water, not boiling, in which you pour your essential oils. It is very important that you shake your container before and during use.

Caution:

Avoid spraying your preparation in the direction of another person or pet. Alcohol and certain essential oils are irritants.

Do not spray your essential oils towards a flame, especially if you used alcohol for their dilution.

Do not spray your essential oils on your food, or on pet food.

Avoid spraying water on wooden furniture, waxed, polished wood, etc. to avoid stains. If you often spray essential oils in your home, it is best to use distilled water or demineralized water, so as not to leave marks on your furniture, curtains, floors.
